DETAILED ACTION

This is a response to a Request for Continued Examination dated on October 31, 2007.

Claims 1-89 were originally pending.

Claims 1-89 were rejected on February 9, 2007.

Applicant cancelled claims 1-89, added new claims 90-108.

Claims 90-108 were rejected on August 2, 2007.

Applicant amended Specification and Claims in response to the Office Action mailed on August 2, 2007. Applicant cancelled claims 93, 95, and 103.

Claims 90-92, 94, 96-102, and 104-108 are currently pending in the application.

Specification

1. Amendments to the Specification filed on October 2, 2007 and October 31, 2007 has been entered and accepted.

Response to Arguments

1. Applicant's arguments, see Remarks, filed October 31, 2007, with respect to independent claims 90, 100, and 104 under 35 USC 103(a) have been fully considered and are persuasive. The rejections have been withdrawn.

Allowable Subject Matter

1. Claims 90-92, 94, 96-102, and 104-108 allowed.
2. The following is an examiner's statement of reasons for allowance:

Applicant's invention in summary is based on a method of protecting software by way of controlling network server key distribution, and program execution using cryptography utilizing a specialized cryptoprocessor. Considering claim 1, which is the Applicant's broadest claim, and representative of the other independent claims, the novelty lies in the limitation/feature (e) regarding reencrypting in said server said chip identifier together with a decryption key corresponding to said first encryption key to produce at least one encrypted data block such that each bit in said encrypted data block is a complex function of every bit in said decryption key and every bit in said chip identifier. This limitation is about the network server distributing a software decryption key in which the client's chip identifier received previously from the client is reencrypted along with the software decryption key for transmission back to the client as one encrypted data block taking the decryption key, and chip identifier together as the encryption data. Applicant's motivation is to prevent unauthorized persons from using an encrypted chip identifier, and an encrypted software decryption separately and to prevent discovery of software decryption key even if a chip identifier becomes known. The closest prior art found was Ishibashi et al. [US 6728379 B1], further in view of McCarty [US 5666411]. The prior art found does not teach or suggest the limitation described above. There are

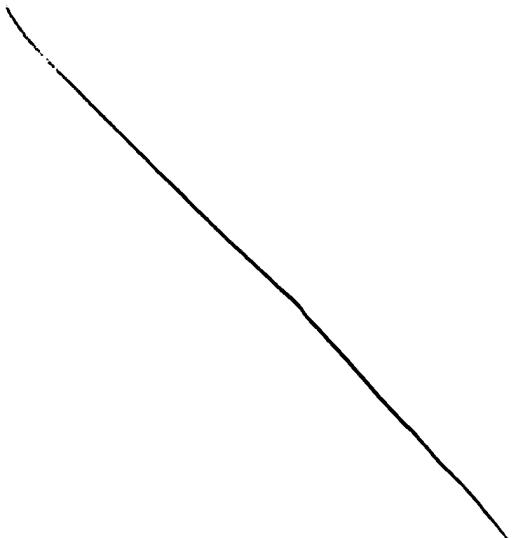

no other references that can be found, or to be combined to teach or suggest the above described limitation.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
